Knife Plus

Complete Disc Recovery Package

for Amstrad CPC6128 and PCW Computers

Knife Plus

Complete Disc Recovery for your Amstrad

Knife Plus is a full-featured disc recovery program for the Amstrad CPC6128 and PCW range of CP/M computers. Running under CP/M Plus, it allows you to copy and repair damaged discs, whether they are CP/M or Locoscript discs.

Included in the package is:

- a sector copier to copy your discs ignoring any bad data.
- full range of sector-edit commands.
- a build-file option allowing a corrupted file to be created sector-by-sector or block-by-block.
- an informative help screen.
- a host of essential utilities.

Knife Plus allows you to search through sectors, blocks or files with easy screen-editing of the data on the disc. Any updated information is only written back to the disc when you say so. All the features are available from simple, one-key commands and there is a help screen to assist you.

The sector copier supplied is essential for quick disc recovery and this, coupled with the power of the disc-editing available makes **Knife Plus** second-to-none for disc recovery.

Knife Plus is supplied with a number of extremely useful CP/M file-handling utilities:

Wdel makes file deletion a much simpler process, presenting each name in turn and asking if you want to delete it.

Sdir produces a much more detailed listing than DIR, showing each file's length and the number of records it occupies, along with the amount of disc space free. All in less than 1K.

Unera is just the tool you wish you had when you've deleted a file by mistake; in almost all cases Unera will be able to recover the file as if it had never gone away.

Copy is a really handy program for backing up discs or copying groups of files, optionally prompting you for each copy.

Page allows quick-and-easy printing of multiple text files with page numbers and form-feeds to produce a neat, paginated listing.

Gensub generates submit files for you.

Knife Plus and all these other programs are supplied on a 3" disc with a complete disc hacker's manual.

Knife Plus is just one of a range of HiSoft products for the Amstrad computers. Also available are fast, powerful implementations of the Pascal, Modula-2 , C, and BASIC languages together with the standard assembly-development package, Devpac80. Full details are inside this wallet.
